Customer Reviews

Geert Schuiling has always had a passion for making things by hand and has been recycling to create useful and fun items long before it became fashionable. He built up his leather business to four shops and a factory employing 60 people producing watch straps, belts, satchels, handbags, sandals, shoes, and other items based on customer demand. Since joining Woodheads 20 years ago, he has worked with business, NGOs, designers, and customers in styling, pattern making, and producing leather products. He also wrote training manuals and offers training to develop the skills

required for making leather goods such as sandals, sheepskin slippers, and satchels. Working alongside well-known designers and interior décor companies, Geert loves creating new items for the local and international markets. He and his family live in Cape Town, South Africa.

In another life, I made a few things with leather, a few things with suede, but I was more interested at that time with working with leather. My grandfather had once-upon-a-time owned a shoe-making and repair shop (after first being a glass-blower, then working for B&O RR), so when I was young the idea of someone actually making a pair of shoes intrigued me and eventually I inherited many of his related tools. At some point I took a course, and had an artist gallery owning friend who had started out designing purses, and I learned a bit from him, as well.

It's been more than a few years, but when I saw this book, I was curious about the aspect of it. The levels involved in accomplishing these projects progress from simple to more advanced items that you would likely use, with a few tools, some supplies and some fairly basic techniques. There's a section that deals with the basic items you will need, from mats to cutters, pliers, hole punches, mallets and pads, cutters, pads, needles, anvils, awls, dividers, rivet setters, press-stud tool and edge beveler, skiving tool and a hand protector. It discusses the types of leather used in this book; Vegetable-tanned leather, Side leather (chrome tanned), Upholstery (chrome-tanned) leather, Suede. Stitches used to assemble the leather items you're creating, which are all relatively easy to master. Some of these items surprised me, since I know they are the most requested ones, office desk items like a Business card holder, a document holder (notebook), stationary tray, a small bin (wastebasket), and such. A Firewood carrier, something so utilitarian but that would make a thoughtful gift for someone who would use it regularly. A two wine bottle carrier is a work of art. The two-pocket satchel and the laptop bag are both lovely. A barbeque apron. A lot of jewelry, a 12-string armband, a wrist strap, and a wrap-around wrist strap, and more. Hanging picture frames! Several purses, and more and more. My favourite item is the Magic Sandals not only do they look simple to make, they look incredibly comfortable and I love the style. I fully intend to try to make these, and I suspect based on how simple the instructions are, that I will succeed. This is a very well thought-out and put-together book which will likely give you ideas on how you can use what you learn and progress to your own designs from there, if that is your goal. The illustrations and instructions are very clear and easy to follow. The projects allow you to learn a variety of techniques and then apply those to another project, and have a sense of satisfaction that

you've accomplished something you'll actually use. Or, maybe you just want to try something new. Many thanks for the ARC provided by Rowman & Littlefield / Stackpole Books
