The Major Histocompatibility Complex Region Of Domestic Animal Species (Comparative Immunology)

Synopsis

The major histocompatibility complex (Mhc) is one of the few identified gene systems in domestic animals that is associated with quantitative traits such as disease resistance, immune response, growth, and reproduction. As knowledge of this important system increases, we move closer toward the reality of genetic enhancement of animal welfare and production efficiency. This book represents the current state of knowledge on the Mhc of agriculturally important animals and explores the latest advances in technology. For the first time, the unique findings of recent Mhc research are presented in a single source. The Major Histocompatibility Complex Region of Domestic Animal Species begins with a discussion of the evolution of Mhc. The chapters are then organized with respect to specific species, with a chapter devoted to each. The Mhc of mice and humans are used as a common reference for comparisons between diverse species. The text concludes with a look at future strategies and directions in Mhc research. Comparative immunologists and geneticists, veterinarians, animal breeders, researchers, and university and postgraduate students will all benefit from this detailed look at the evolution, structure, and organization of Mhc.

Book Information

Series: Comparative Immunology

Hardcover: 336 pages

Publisher: CRC Press; 1 edition (August 28, 1996)

Language: English

ISBN-10: 0849380324

ISBN-13: 978-0849380327

Product Dimensions: 0.8 x 6.8 x 9.8 inches

Shipping Weight: 1.4 pounds (View shipping rates and policies)
