Customer Reviews

"This is a comprehensive text on the growing field of critical care medicine as well as a frequent reference source. It is authoritative in that more than 80 experts from around the world have shared their specialized knowledge, extensive and intensive experience, and invaluable insight in making this print book and online resource a very valuable one." ~ Nano Khilnani

Best Critical Care text to have. Ideal algorithms to have available and well written for quick understanding. If you are in Critical Care Medicine, this reference is a must

good reference book, some topics not covered (not alot of space for rheumatologic stuff, but really thats not why i bought this book), but good companion to marinos book (which is more theory and the art of critical care). This book has alot of hard numbers and cut offs, which is hard to find in critical care.

I mean its a text book, and it is really more of a really large meta-analyses of everything medical. It is difficult to read at times as it is very dry and very technical. There are also not many pictures or diagrams, just page after page. The author also enjoys using abbreviations and acronyms so that gets annoying.

I love the new format. Avid reader good updates

My husband is in a critical care fellowship and loves this book. Highly recommended.

Comprehensive, colorful, useful online ultrasound images

this is a very very good book! a must have for everyone that has an interest in pulm crit care

Excellent book! Everything I was looking for, it is just there.
